## What's New In?

This plugin encodes the incoming audio signal to stereo with the goal of achieving the best compression ratio without losing original sound quality. It has three modes:

- Internal: The encoder is integrated within the host. - Encode: The encoder converts the incoming audio to mono, feeds the audio to the host for compression and then converts the incoming stereo to mono. - Normal: The encoder only works in Mono. More information: What does the EQ do: The plugin works in stereo, and generates two outputs (Left and Right). It is capable of working with two inputs. One signal is encoded internally and the other one is encoded externally and passed through the plugin. The plugin aims to optimize the incoming signal for quality-wise lossless compression while trying to preserve the signal as much as possible. NOTE: The plugin uses the Audacity GUI to select the input and output waveforms. The algorithm uses the audio data and surrounding information of the signal in order to select the best mono/stereo downmix, the best bitrate and the best quality mode. The plugin can be configured for both mono and stereo signals, but it has no control over the compression level and the quality of the algorithm depends mostly on the bitrate used, the encoder used and the available cpu power. To optimize the performance and quality of the plugin, Audacity users can select either the Internal or the Encode mode and they can also select the Quality mode for maximum quality and minimize the processor load. To reduce the effects of noise and prevent the degradation of the quality of the input, the plugin tries to detect the noise and attenuates it in each internal or external signal before processing it, by using the built-in Noise Detectors. The options for the EQ are: - Input: Selects the input signal. - Modes: Selects the mode. - Input Mode: Allows you to select either Internal or External. - Encoder: Allows you to select between the two available encoders: Libav or Speex. - Quality: The quality mode. - Noise Detectors: The built-in noise detectors. - Audacity: If you are using the Encode mode, Audacity will control the compression and quality. - Latency: The latency mode. - Processors: Lets you select the number of sound processors. - Configurations: You can configure the plugin from within the plugin settings. - Save: You can save the current configuration. NOTE: 1. If the plugin is running in the Internal mode, it can get very processor-

intensive, so you should be prepared for this. 2. The plugin cannot work without an audio input signal. 3. The plugin can only work in the

## **System Requirements For SPAZIAL EQ M S:**

Windows (and Mac OS X): Processor: 2.0 GHz processor RAM: 2GB RAM Graphics: nVidia GeForce GTX 650 or ATI Radeon HD 5850 (Recommended) DirectX: Version 9.0 Storage: 8GB available space Additional Notes: This game does not support 64-bit operating systems (Windows 7 64-bit, Windows 8 64-bit, Windows 8.1 64-bit).  
Mac: Mac: 2.0 GHz processor RAM: 2GB RAM
