The main reason I'm asking is that I got more or less useless votes yesterday on a post on Stack Overflow. This

post was an attempt to get a different way of doing something, so a simple down vote (that I don't understand) is not a solution, but a punishment. What can be done? A: Use your rep to send them up. If you find a problem with the down vote, you can discuss it on chat, or through the contact form. A: Typically, if I feel like a down vote is warranted, I'll edit it. I can see two possibilities for a down vote, one which makes more sense to me and one which doesn't. The post is unclear. If the purpose of the post was really unclear, this downvote would be reasonable. There's a good chance someone could tell me what the purpose of the post is after reading it. The post is incorrect. This is generally why a downvote comes about. I would never downvote a post which I thought was correct and informative. I think it depends on the situation, but I generally don't downvote someone just because they get a down vote. I'll comment instead, or try to help them make their post

better (or at least not worse), but I don't think that someone getting a down vote means that they're getting a punishment. A: I can't believe that you've been downvoted more than once. Not only is it a useful question, it may get you the reputation you deserve as a serious questioner. Asking your question here is what is known as the "bake off", and it seems that there is no way you can win it. So, learn from it. Re-write it to make it a better question. Use the good information given here, and 2edc1e01e8

Tray Icon Manikin is a simple developer's tool that lets you easily test your icons at tray bar. Choosing icons for a newly built software may be a nightmare and a terrorizing work.
